

SimplicitySlate in the Classroom

Sage on the stage no more! From anywhere in your classroom, you have complete control of your computer and interactive white board with the help of the SimplicitySlate (iMMPad). Using this presentation/teaching tool, teachers can move around the room, sit down with students, pass the pad around, and experience freedom from being next to the computer and/or interactive whiteboard.

Teachers and students can use both the interactive white board and the slate during whole-group, small group and individualized instruction/learning and assessment.

Increase student engagement by allowing...

- students to take the lead at the interactive white board (IWB) while the teacher facilitates learning by using the slate. Teacher can pass the slate to students to demonstrate learning.
- the interactive white board (IWB) becomes a learning center/station while teachers facilitates a small group. Teacher can support IWB from across the room. Using the slate
- quick access to digital tools on teacher laptop and Web 2.0 tools without being tied to the computer or IWB.
- Easy tool to use to demonstrate math problems and handwriting skills.
